## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-13 and 16-20, which have been renumbered as 1-18 respectively, are allowed.
2. The following is an examiner's statement of reasons for allowance: Regarding claims 1-18, the prior art of record fails to teach of if one or more request signals include a request signal from a component of the second type: receiving assertions of hold acknowledge signals from each of the components of the first type; asserting a grant signal to a selected component of the second type after receiving the hold acknowledge signal assertions; and where the components of the first type assert each assert a respective hold acknowledge signal in response to assertion of the hold signal, and where any component of the first type that is actively accessing the XPORT delays assertion of the hold acknowledge signal until said accessing is completed. The closest reference, Walsh et al. (U.S. Patent No. 5,848,253), teaches of providing access to a limited resource in a digital signal processing system by receiving one or more request signals from a set of components of two distinct type; responsively asserting a grant signal to a selected component of a first type if the one or more request signals are each from components of the first type; and responsively asserting a hold signal to each component of the first type if the one or more request signals include a request signal from a component of the second type, but fails to teach of if the one or more request signals include a request signal from a component of the second type: receiving assertions of hold acknowledge signals from each of the components of the first type;

asserting a grant signal to a selected component of the second type after receiving the hold acknowledge signal assertions; and where the components of the first type assert each assert a respective hold acknowledge signal in response to assertion of the hold signal, and where any component of the first type that is actively accessing the XPORT delays assertion of the hold acknowledge signal until said accessing is completed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### **EXAMINER'S AMENDMENT**

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert D. Marshall, Jr. on 11/23/2005.

Replace the Abstract filed on 11/8/2001 with the following Abstract:

### **ABSTRACT**

A digital signal processing system includes multiple processor subsystems, an external input/output port (XPORT), and an XPORT arbiter. The processor subsystems each include a processor core and a DMA controller. The XPORT arbiter arbitrates between the processor cores and between the DMA controllers, and further arbitrates between processor control or DMA control of the XPORT. Upon a request signal from a DMA controller, the XPORT arbiter asserts a hold signal to the processor cores. The processor cores respond by asserting a hold acknowledge signal. A processor core will delay the hold acknowledge signal until through with the XPORT. The arbiter, then asserts a grant signal to the DMA controller requesting access. The arbiter may assert a grant signal to a processor core requesting access. However, the processor core's access will be stalled as long as the hold signal is asserted.
